NVeyeTech will be Demonstrating Its New Night Vision Systems at AIMExpo in Columbus, Ohio September 26 – 29

September 26, 2019 - CLEVELAND, OH – NVeyeTech, the PowerSports Industry's most innovative supplier of night vision systems will be introducing the motorcycle world's first, intelligent night vision camera system with high-resolution display, at AIMExpo in Columbus, Ohio September 26 – 29. This new system provides improved visibility at night for motorcycles, boats, ATVs and snowmobiles. NVeyeTech will be demonstrating this patent-pending smart camera and display system at Booth #1043.

The NVeyeTech Night Vision System increases distance and lateral visibility in low light to complete dark conditions by using IR light to illuminate animals and road hazards from a much greater distance so you have time to react safely. The intelligent camera includes image correction and stabilization algorithms specifically engineered for mobile use to provide over 500 feet of true night vision. Image resolution is 1490 x 1080 pixels for full HD video in a nighttime red or military-green display.

With the downloadable app for iOS and Android devices the system offers GPS navigation, over 8 hours of recording time, digital zoom, and a unique "double-tap" function that automatically captures imagery from the previous 60 seconds. The rugged, weatherproof camera and display are designed to work with several different universal mounts for optimum location on all powersport vehicles. A flat SAE 2 pin connector makes installation fast and easy.
